▼ CHALLENGE

Several large and simultaneous construction and renovation projects were slated for completion within a short period of time. A shortage of qualified staff in the Supply Chain function was accompanied by a freeze on new FTE hires. The need to track vendor accountability was especially critical.

▼ SOLUTION

EMTS placed experienced personnel on-site to manage and support supply chain functions through our Onsite Capital Resource (OCR) solution. All phases of the construction and renovation projects were managed, including planning, design, construction, purchasing, delivery, installation, and activation.

▼ IMPACT

Projects were completed on time and under budget, and purchases were made at the lowest possible price. EMTS added more staff as the workload warranted, and vendors were tracked and held accountable during the entire process.
